

# Stand Up!

# Objectives & Key Outcomes

## THE TAKEAWAYS FROM THIS CLASS

By the end of class today, you will be able to:

Use the CSS  
position property  
to position  
HTML elements  
on the page

Use multiple CSS  
files to style the  
page

Use Chrome Dev  
Tools to test CSS  
changes

# CSS Positioning

# CSS Positioning

## Position Your Elements

Notebooks Ready? It's time for a mini lecture.

# CSS Positioning

## Various Position Types

- **Relative** - Positions elements relative to their static location in the document. These elements behave with and interact with other elements the same way they would as if they were positioned statically, except that you can use the **top/right/bottom/left** properties to move the elements *after* they have been placed into the document flow.
- **Absolute** - Positions elements relative to the nearest positioned ancestor (non-**static**). They are taken out of the flow of the document, taking up no space when placing other elements. These elements will move in the viewport as you scroll (unlike fixed).
- **Fixed** - Positions elements relative to the top left of the browser window. Similar to **absolute**, except the containing block is the whole viewport. These elements will remain in the same place in the viewport as you scroll.
- **Z-Index** - Allows us to position elements on top of one another.
- **Display: none** - Allows us to hide specific elements from the view. Useful because it can activate and deactivate elements. (Compare with **visibility: hidden;**, which also hides elements but not the space they take up.)

## WATCH & LEARN

Close your laptop. Eyes on my screen. Pay attention.

```
<head>
  <meta charset="UTF-8">
  <title>CSS Positioning Demo</title>
  <!-- Comment out each stylesheet to get the one you'd like to see
-->
  <link rel="stylesheet" href="reset.css">
  <link rel="stylesheet" href="static.css">
  <!-- <link rel="stylesheet" href="relative.css"> -->
  <!-- <link rel="stylesheet" href="absolute.css"> -->
  <!-- <link rel="stylesheet" href="fixed.css"> -->
  <!-- <link rel="stylesheet" href="zindex.css"> -->
  <!-- <link rel="stylesheet" href="invisible.css"> -->
</head>
```

# CSS Positioning

## WATCH & LEARN

Close your laptop. Eyes on my screen. Pay attention.

```
relative.css
1  .box-set {
2    background: #eaeaed;
3  }
4  .box {
5    background: #2db34a;
6    height: 80px;
7    position: relative;
8    width: 80px;
9  }
10 .box-1 {
11   top: 20px;
12 }
13 .box-2 {
14   left: 40px;
15 }
16 .box-3 {
17   bottom: -10px;
18   right: 20px;
19 }
```

**relative position  
sets boxes relative to its original location  
(i.e. below or left of where the element  
would normally be)**

```
absolute.css
1 / **
2  * Absolute Position: anchors element to the first element (overall box)
3  **/
4
5 .box-set {
6     height: 400px;
7     background: darkgray;
8     position: relative;
9 }
10
11 .box {
12     /* Absolute Position */
13     position: absolute;
14     height: 150px;
15     width: 150px;
16     background: #2db34a;
17     border: 2px solid black;
18 }
19
20 /* Box rules: percentages define anchors (i.e. position of each box relative to enclosing element) */
21
22 .box-1 {
23     top: 6%;
24     left: 2%;
25 }
26
27 .box-2 {
28     top: 0;
29     right: -40px;
30 }
31
32 .box-3 {
33     bottom: -10px;
34     right: 20px;
35 }
36
37 .box-4 {

# CSS Positioning

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- Make sure each member of the group is typing out their own code!
- Create a file called **positioning.html** and a file called **positioning.css**.
- Using HTML/CSS, create the layout as shown in the image, or on the next slide
- For reference, the colors used on the screen are **#eee** and **#999**.

**25**  
**minutes!**

<div>  
position: fixed

minutes!

**Stay Seated & Take 3 Deep Breaths.**

**RELAX.**

Now take a short walk. Clear your head. After a few minutes break, quickly review your notes.  
We'll start back in 5 minutes.

# Review

# Review Time

## TAMING THE TORNADO OF INFORMATION

Notebooks Ready? It's time for a review.

# Review Activity One

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- Create three Github repositories.
- Clone one of the repositories down locally.
- Create a new HTML file that contains a title, three paragraphs, and an image.
- Add, Commit, and Push the file up to the repository.
- Complete these steps two more times.

# Review Activity Two

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- Using one of the Github repositories created from Activity One, create an **index.html**.
- Create a **style.css** at the root of the directory (so that it's adjacent to **index.html**).
- Create a new folder named **assets** and place a new **style.css** file in it.
- Create a new folder inside of your **assets** folder called **styles** and place yet another **style.css** file inside of it.
- In your **index.html** file, create three links, each pointing to a different **style.css** file.

# Review Activity Three

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- Using the starter code inside of **review\_3**, float the **divs** named **container-x** so that the **divs** line up on the same row.
- Be sure to check out the result in a browser as you are working!
- Next, apply the clear-fix hack on the **div** with the class, **lorem-card** so that the border encapsulates the image.
- The result should look like the distributed image **final.png**

# Review Activity Four

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

Editing only the CSS file, **style.css**, you'll be practicing using various selectors by filling in the blanks. As you fill in the blank for each problem, run the **index.html** file in the browser so you can see the changes taking place.

### Goals:

- Select all **p** tags within **#sibling-1**
- 2. The **<h3>** tag is an immediate child of the div, **#sibling-1**. Select all **<h3>** tags.
- 3. Select the **<div>** element with the id of **#sibling-1** and its adjacent sibling, **#sibling-2**
- 4. Select **#sibling-1** and the element's sibling, **#sibling-4**
- 5. Select **<p>**, **<h3>**, and **<h4>** tags

# Q & A

lunch.

# Chrome Developer Tools

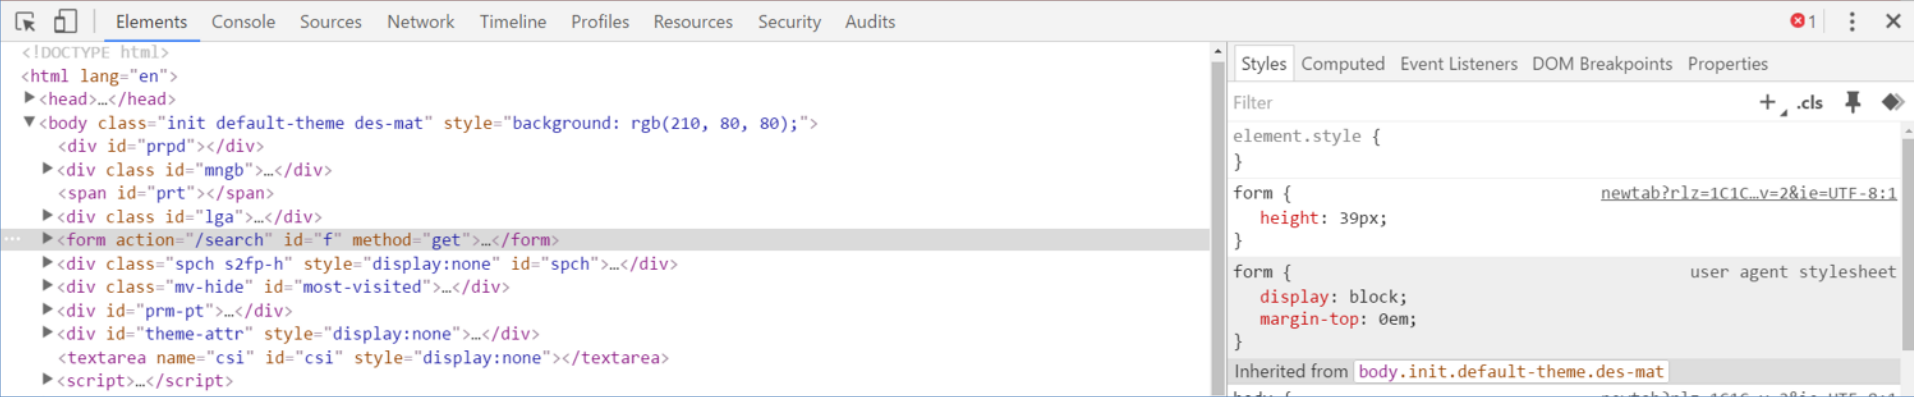

# Chrome Developer Tools

## WATCH & LEARN

Close your laptop. Eyes on my screen. Pay attention.

SEARCH YOUR FEELINGS LUKE. YOU KNOW IT TO BE TRUE.

A screenshot of the Chrome Developer Tools interface. The top bar shows tabs for Elements, Console, Sources, Network, Timeline, Profiles, Resources, Security, and Audits. The Elements panel is active, displaying the HTML structure of the page. The `<body>` element is selected, showing its attributes and child elements. The `form` element is highlighted. The Styles panel on the right shows the default styles for the `form` element, including `height: 39px;` and `display: block;`. The `body` element's `background-color` is set to `rgb(210, 80, 80);`.

# Chrome Developer Tools

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- For the next 15 minutes, take 2 websites that you commonly use (Amazon, Huffington Post, etc.) and heavily modify it using the Chrome Developer Tools. Really get creative here!
- Be sure to at least modify:
  - Content (Change words)
  - Colors
  - Spacing
  - Images

**15  
minutes!**

**Stay Seated & Take 3 Deep Breaths.**

**RELAX.**

Now take a short walk. Clear your head. After a few minutes break, quickly review your notes.  
We'll start back in 5 minutes.

# Reset CSS

# Reset CSS

## WATCH & LEARN

Close your laptop. Eyes on my screen. Pay attention.

```
<!-- This critical line points your HTML to the CSS file. Notice the  
"relative" pathway -->
```

```
<link rel="stylesheet" type="text/css" href="style.css">
```

```
<link rel="stylesheet" type="text/css" href="style2.css">

```

# Chrome Developer Tools

## INDEPENDENT PRACTICE

It's time to fly. Focus. Work hard. Ask for help when you need it.

Work in PAIRS to complete all of the goals below.

### Goals:

- Create a file called **reset.css** in the same folder as **example.html**
- Fill the contents of **reset.css** with the CSS made available on this link:  
<<http://meyerweb.com/eric/tools/css/reset/>>
- Follow the instructions in the HTML document to incorporate a reset.css file into a basic HTML file.
- Note the impact the reset file makes after its inclusion.
- **Challenge**
  - Create a new **style.css** with a few style changes and link to it before and after the link to **reset.css** and observe the differences.

**15  
minutes!**

# Recap
